

AAKASH RANGA

Full Stack Web Developer | Automation Engineer | Digital Marketing Specialist

+91 8939008355 @ akashranga27@gmail.com github.com/AakashRanga Chennai, Tamil Nadu - 600056

SUMMARY

I am a results-driven Full Stack Web Developer and Automation Engineer with over 4 years of experience in creating scalable web applications and implementing end-to-end automation pipelines. Proficient in both backend and frontend technologies along with AI-driven automation tools, I am skilled at delivering efficient code and integrating RESTful APIs. My expertise helps achieve significant business outcomes through intelligent automation and effective digital marketing strategies

EXPERIENCE

Web Developer

SIMATS

08/2023 - Present Location

- Develop and maintain dynamic web applications using PHP, Python, Django, and Flask; architect RESTful APIs consumed by mobile and third-party clients
- Design and implement automation workflows using Selenium and Playwright to reduce manual QA effort by ~60%; build and orchestrate n8n-based pipelines for internal data-processing and task automation
- Prototype AI-driven automation agents leveraging CrewAI and LangGraph frameworks for document processing and task orchestration
- Architect and maintain n8n-based automation flows integrating webhook orchestration, API pipelines, JSON parsing, and node expression handling for distributed workflow execution across university systems
- Build async systems using Redis and Celery for queue workers, webhook response handling, and distributed execution behavior; enabling reliable background task processing at scale
- Manage Meta Ads (Facebook & Instagram) campaigns to drive traffic to university web portals; conduct keyword research and on-page SEO to improve organic ranking
- Administer MySQL databases, optimize slow queries, and maintain VPS servers on AlmaLinux with CPanel
- Received 'On Time Delivering Project' award - June 2024

Web Developer

Surya Informatics

11/2021 - 08/2023 Location

- Built and delivered client web projects on schedule using PHP, HTML, CSS, Bootstrap, and JavaScript, maintaining clear communication across departments
- Developed automation scripts using Selenium for regression testing and data scraping, reducing repetitive manual tasks by ~40%
- Managed client support interactions and provided detailed project progress reports to stakeholders
- Implemented SEO best practices (meta tags, structured data, page speed optimization) resulting in improved search visibility for client websites
- Recognized as 'Most Outstanding Employee of the Year' - February 2022

System Specialist

CTTI

09/2020 - 11/2021 Location

- Developed and designed information systems for clients; provided technical support for hardware and software configuration
- Configured and troubleshooted Cisco switches and routers; set up and maintained wireless access points across the organization
- Assembled, diagnosed, and repaired all categories of desktop and workstation PCs

KEY ACHIEVEMENTS

On Time Delivering Project Award - SIMATS

Received 'On Time Delivering Project' award for timely project completion, showcasing project management and delivery skills

Most Outstanding Employee of the Year - Surya Informatics

Recognized as 'Most Outstanding Employee of the Year' for exceptional performance and contributions to client projects

SKILLS

Django	Flask	Python	PHP
RESTful API	HTML	CSS	Bootstrap
JavaScript	jQuery	Selenium	Redis
Celery	REST	Instagram	SEO
Ajax	Linux	Git	GitHub
Node.js	Cisco Switches	Routers	JSON

PROJECTS

n8n AI Agent Orchestration Platform

08/2023 - Present SIMATS

n8n AI Agent Orchestration Platform

- Designed an end-to-end n8n-based AI agent orchestration platform integrating webhook triggers, API pipelines, JSON parsing, and node expression handling; deployed CrewAI and LangGraph agents as workflow nodes
- Utilized Redis queue workers and Celery for distributed, async execution, eliminating 15+ hours of manual processing per week

Cross-Browser Test Automation Suite

Cross-Browser Test Automation Suite

- Built a parallel test automation framework in Python using Selenium and Playwright covering 200+ test cases
- Integrated with GitHub Actions CI/CD pipeline for automated regression runs

AI Agent Workflow

AI Agent Workflow

- Engineered a multi-agent AI pipeline using CrewAI and LangGraph to automate document summarization and task routing
- Reduced turnaround time for content processing by 70%

EDUCATION

B.Tech

St. Peter's Institute of Higher Education and Research

08/2016 - 06/2020 Location
